

# KEEPING BRITAIN MOVING

---

## Rivus

From the Latin word for 'river'

We keep your business moving with total end-to-end fleet management solutions.

# WHY RIVUS?

Rivus Fleet Solutions, formerly known as BT Fleet, is one of the UK's largest full-service fleet management companies. We handle every stage of the vehicle lifecycle. Like a river, our service

flows from the initial source of obtaining vehicles, downstream through all the services needed to keep our customers moving.

**Our fleet management solution includes:**

- + Supply and funding of cars, LCVs and HGVs
- + Service, maintenance and repairs
- + Compliance, including licences and certificate
- + Authorised test facilities
- + MOT and ancillary testing (Class IV, V and VII)
- + Plant, ancillary and specialist equipment, e.g. cranes and on-board power
- + Accident management
- + Vehicle rental
- + Moving vehicles on at the end of their lives
- + Mobile support

# WHO DO WE SERVE?

We cater for small vans, HGVs and everything in between. While we specialise in essential operational fleets, we can support anyone with

fleet requirements and have done so for many of the UK's biggest and most well-known fleet operators.

**We have a long history of supporting key sectors, such as:**

 <b>EMERGENCY SERVICES</b>	 <b>FREIGHT</b>	 <b>ENVIRONMENT</b>
 <b>UTILITIES</b>	 <b>GOVERNMENT</b>	 <b>COMMUNICATIONS</b>

# THE RIVUS STORY

---

To find the origin of Rivus, you have to wind the clock back over 100 years to when we were once known as GPO. Back then, our dedicated build engineers worked relentlessly designing and creating bespoke vehicles and equipment using traditional engineering tools. By the end of the 1960s, the GPO was separated into two companies, one of which was a telecommunications company which is what we now know as BT.

BT successfully ran and maintained their own fleet of thousands of vehicles and saw a gap in

the market for other businesses that were looking for an experienced provider who could manage their fleets. With the right expertise and nationwide garage coverage, BT Fleet was set up in 2002 and then rolled out their fleet management services to support other businesses.

In 2019 BT decided to sell their fleet operation and it was acquired by the Aurelius Group, who renamed the business Rivus Fleet Solutions.

The story now continues into the 2020s for one of the UK's leading fleet management companies.

We manage the largest vehicle procurement exercise in Europe and our partner network of 500+ workshops come with manufacturer approved diagnostic equipment for your commercial vehicles. All vehicle types are available with full-service support, up to and including HGVs. We're always looking to the future too, integrating the latest low-carbon technologies into our product range, including fully electric vehicles.

The literal meaning of Rivus comes from the Latin word for 'river', but it represents much more than that.

It reflects the comprehensive nature of our fleet management services across all stages of the vehicle life cycle, from the initial source of vehicles through to the provision of downstream services.

## The river is reflected in our commitment to:

---

+ Keeping your business moving

+ Streamlining your operations

---

+ Keeping Britain moving

+ Providing end-to-end solutions

---

# RIVUS IS PERFECTLY PLACED TO SUPPORT YOUR FLEET REQUIREMENTS

---

## Control your compliance responsibilities

Safety is our number one priority and we guarantee our customers that we adhere to our safety policies and practices at all times and in all situations. We enable you to maximise safety and compliance performance by:

- + Providing a fully integrated occupational road risk-management solution
- + Reporting proactively on any non-compliance, such as missed test appointments
- + Integrating your data from multiple sources for ongoing insight into your safety performance
- + Alerts delivered via an app for important compliance-related dates, such as testing

We have ISO 18001 accreditation which applies to our full UK garage network and are an acknowledged safety leader within the fleet sector.

## Minimise your Vehicle off Road (VoR) performance

We prove time and again that it is possible to minimise VoR and maximise operational availability for our customers. This is something that underpins our complete approach to fleet management services, from vehicle design and in-life management, through to disposal. Some of the features you can expect are:

- + Smart planning to match your individual requirements with service planning from the outset
- + An owned garage network and multi-skilled technicians for guaranteed standards and one-stop shop availability
- + Combining jobs with an estimated completion date (ECD) always provided
- + Real-time tracking of vehicles from arrival at the garage through to completion

- + Strategic parts stocking and warranty status from leading manufacturers

This reduced downtime is not only good news for you and your costs, but great news for your customers too.

**Minimise your Total Cost of Ownership (TCO)**

Before you commit to any long-term decision, we conduct a forensic review of your direct and indirect fleet costs. This considers the whole life of ownership, including funding, vehicle selection, servicing schedules and length of ownership. Our approach focuses on:

- + Identifying the optimal approach to vehicle acquisition, whether it's leasing or buying
- + Identifying which costs can be avoided – both direct and indirect
- + Deploying the right strategies to control costs
- + Ensuring transparency and visibility so that you're kept in the loop every step of the way

We know that no fleet management decision can be taken lightly but with Rivus by your side, you can approach each step with absolute confidence.

**Reduce emissions**

The solutions we deploy to reduce the emissions of your fleet are centred around supporting your organisations' strategies for controlling emissions, protecting the environment and reducing costs. We do this by:

- + Real-life testing of new technologies so we can increase the number of plug-in hybrid or all electric vehicle alternatives with minimal operational risk
- + Considering fuel efficiency across your fleet for the whole term of ownership, including any degradation to performance over time
- + Provision of data to support your journey planning, so you can have optimum payload weights throughout your fleet
- + Providing guidance on how you can best adhere to environmental legislation and integrating this with your procurement of the right vehicles

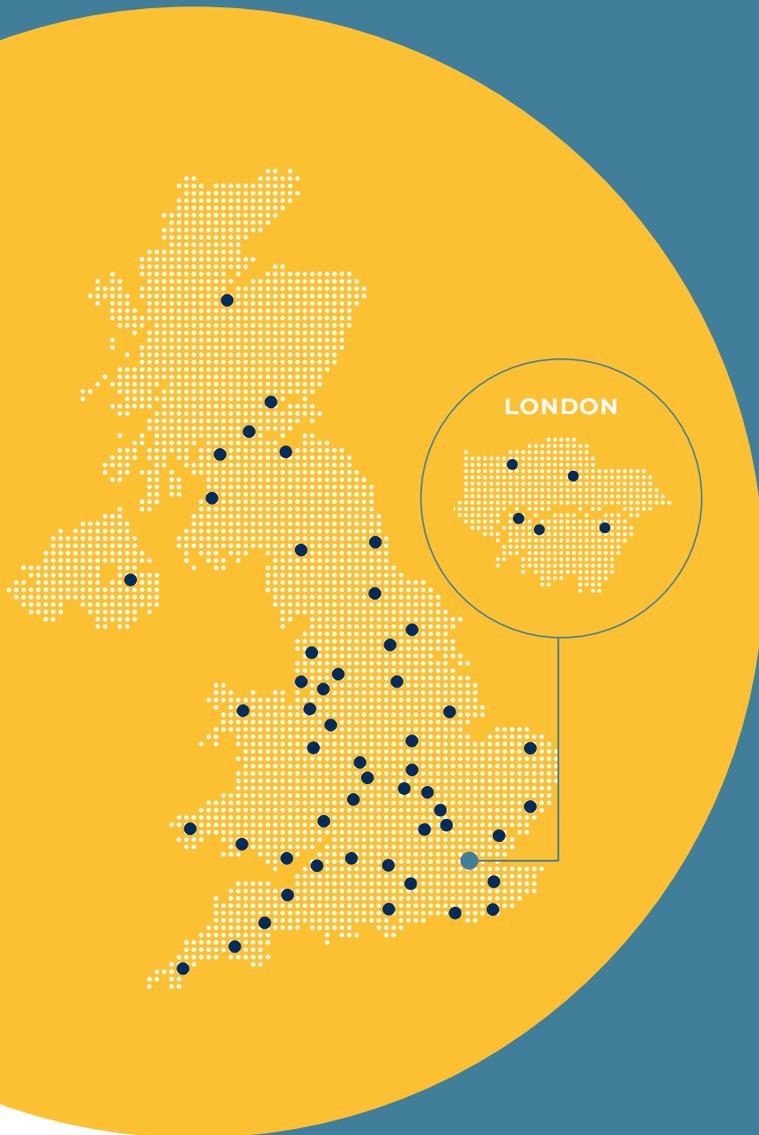

In addition to supporting you in reducing your emissions, we also operate to the highest environmental standards ourselves, with ISO 14001 accreditation for our full garage networks and offices.

WE KEEP  
**85,000+**  
VEHICLES ON
